Answer - Fancy Hotel D

```
#include <stdio.h>
#include <stdlib.h>
#include <ctype.h>
#include <string.h>
#include <math.h>
int main()
       int n,m,x;
       x=scanf("%d %d",&n,&m);
       if(x<0)
                     return 1;
       int male=0,female=0,none=0;
       int gender[n][m];
       for(int i=0;i< n;i++)
                     for(int j=0;j< m;j++)
                                    x=scanf("%d",&gender[i][j]);
                                    if(x<0)
                                                   return 1;
                                    if(gender[i][j]==1)
                                                   female++;
                                    else if(gender[i][j]==0)
                                                   male++;
                                    else
                                                   none++;
```

```
if(none=0)
              if(male%m==0 && female%m==0)
                            printf("FANCY");
              else
                            printf("NOT FANCY");
if(none>0)
              int count=0;
              for(int i=0;i<none+1;i++)
                            for(int j=0;j<none+1-i;j++)
                                           if(((male+i)\%m==0 \&\& (female+j)\%m==0) || ((male+j)\%m==0 \&\& (female+i)\%m==0))
                                                         printf("FANCY");
                                                         count++;
                                                         break;
                            if(count==1)
                                           break;
              if(count!=1)
                            printf("NOT FANCY");
```
